# COMPANY HISTORY

[ HIGH QUALITY & SUPERIOR RESULTS ]

**ARUM!** All about dental CAD/CAM Systems.

ARUM is a globally recognized brand established by DOOWON Co., Ltd. 20 years ago and remains to be at the forefront of the dental industry. Since its inception, ARUM has developed a total dental implant CAD/CAM solution for users worldwide.

ARUM is largely divided into two parts: one is dental milling machines and the other comprised of implant components. Experiencing tremendous growth of dental milling business, ARUM continues to be highly regarded by customers throughout the world.

ARUM offers Screws, Analogs, Ti-bases, Model & Intra-Oral Scanbodies, Premilled blanks, 7 different lines of milling

# PRODUCT PROCESSING

machines and many more.

With superior technical skills, ARUM components are fully Compatible with majority of the present implant companies in the dental industry.

ARUM uses brand-new CNC machines to produce its components, and all of ARUM components are inspected individually. We even have been inspecting not only at the surface level of our product but also at the unseen sides such as screw thread. Moreover, we keep constant quality of its products through a steady calibration and maintenance with control measuring equipment. Our facilities are furnished with a separate washing room, clean room and storage.

Arum utilizes Ti 6AL-4V ELI (ASTM F 136) material for Premilled Blank, Ti-base, and Screws in order to prevent any side effects and increases durability, making it possible to maintain the life of the prosthesis for an extended period of time.

Please join us in our bright future. We will strive to advance towards our goal of instilling the belief that ARUM is the #1 dental solution provider. Through continuous research and development, ARUM promises to develop all its product lines with the finest quality and meticulousness for its customers worldwide.

# Intraoral Scanbody

## A line

With the conventional intra-oral scanbody, it is difficult to validate whether the scanbody has been completely inserted into the implant fixture, which results in high chance of failure of the final prosthesis.

The "A" Line of the ARUM intra-oral scanbody provides an indicator to the operator to check for a complete connection to the implant fixture and thereby ensuring a more precise prosthesis.

[ ARUM Intraoral Scanbody ]

[ Other Intraoral Scanbody ]

## Inner Thread

ARUM intraoral scanbody is specifically designed with an internal spiral thread, which prevents detachment and loss of screw once it is tightened and fully engaged to the implant fixture.

## Concave Line

The lower body of the intra-oral scanbody is concave shaped. This minimizes pressure on the patient's gum during setting of the scanbody, thereby reducing experienced pain and securing a broader gingival area for future implant placement.

## Holder

The holder allows the dentist to quickly and easily set the intra-oral scanbody into the implant fixture. This is especially effective for challenging cases such as the most distal molar.

### Why ARUM Pre-milled Blank having high precision?

The precise seating of the restoration with minimal and regular gap of around the screw has a decisive effect on the lifetime of the implant. Less gap and accurate fitting prevent the worst outcome the restoration comes out from patient mouth caused by losing of the screw.

# Curved Pre-milled Blank

## Raw Material

Ti 6Al-4V ELI (ASTM F 136)

Supplied by Germany

- Prosthetic manufacturing process cost reduction. (time, process, equipment)
- Improved functionality while maintaining aesthetics.
- Designated Screw, Lab Driver, Clinic Ball Driver.

For inquiries on custom products made to order, please contact your respective salesperson or reach us at +82-42-721-3655 ext. #1

[ Products may be produced within 10mm diameter material, and select products may not be available for production ]

## Aesthetics & Easy maintenance

[Pre-milled Blank]

[Curved Pre-milled Blank]

Improved functionality (easier maintenance) without compromising aesthetics (configure screw channel direction from either palatal or lingual side).

## Angle

[flat Type]

[Corner Type]

Adjustable screw channel of prosthetic angle (10/15) angle (flat, corner) direction.

# Lab Driver

- Convenient for use with untouchable driver part
- Easy tip exchange
- Heat treated
- 'Brinell hardness' higher than 55
